**This list is effective 08-30-2010.**

Note: One carbohydrate choice equals 15 grams of carbohydrate. A carbohydrate choice may count as a starch, fruit, or milk in your mealplan.

† Available at participating McDonald's

+ Based on the weight before cooking 4 oz. (113.4g)

++ Based on the weight before cooking 8 oz. (226.8g)

» Made with low fat yogurt

Food exchanges were calculated by a registered dietitian. Please see a health care professional for assistance in using food exchanges for meal planning.

The nutrition information on this website is derived from testing conducted in accredited laboratories, published resources, or from information provided from McDonald's suppliers. The nutrition information is based on standard product formulations and serving sizes. All nutrition information is based on average values for ingredients from McDonald's suppliers throughout the U.S. and is rounded to meet current US FDA NLEA guidelines. Variation in serving sizes, preparation techniques, product testing and sources of supply, as well as regional and seasonal differences may affect the nutrition values for each product. In addition, product formulations change periodically. You should expect some variation in the nutrient content of the products purchased in our restaurants. None of our products is certified as vegetarian. This information is correct as of January 2007, unless stated otherwise.
